

REQUEST FOR INFORMATION (RFI)

LONG-TERM SUSTAINABLE WASTE MANAGEMENT SOLUTIONS ARUBA

In view of the protection of public health and conservation of the environment and in order to keep pace with evolving international standards and best practices, the Government of Aruba has established the objective to transition from its current solid waste management system to sustainable and sanitary waste management that entails a complete process from the waste sources to the recovery of valuable products and environmentally friendly treatment of the remaining waste.

in connection herewith, the Government of Aruba is actively seeking possible solutions to achieve a combination of sanitary landfilling together with other waste management methods, which are more in line with a circular economy and international standards.

Direction for a sustainable waste management solution for Aruba

To identify pathways towards a long-term sustainable solution for Aruba's waste management, The Government of Aruba follows a three track approach:

- 1 A new solid waste thermal treatment facility for energy recovery
- 2 Closure and remediation of the existent landfill at Parkietenbos
- 3 A new solid waste thermal treatment facility for energy recovery

To this extent the Government of Aruba has prepared a market participation process seeking input from interested industry partners for either solutions on the individual tracks or integrated solutions.

Track 1

RFI 1 solid waste thermal treatment for energy recovery solution

Track 2+3

RFI 2 remediation landfill & a sanitary landfill
